

Project Report

Date	12 November 2022
Team ID	PNT2022TMID04092
Project Name	Project - IoT Based Safety Gadget for Child Safety Monitoring and Notification

1. INTRODUCTION

1.1 Project Overview

A tracker that helps parents track a child's location so that the child does not get into dangerous situations.

1.2 Purpose

Now a day's Parents have more responsibility than older about their children's. Because Crimes rates are increasing day by day in our country, Crimes such as Child Amusement, Rapes, Murders, Illegal Relationship to avoid these kind of crimes parents must watch their children every step. Eventually mobile phones cause major allegations on our society. Many teens must be noticed by their own parents, it is our duty. But sometimes children are arguing with their parents for watching their steps, to overcome these issues, we need to watch them through online

2. LITERATURE SURVEY

2.1 Existing Solution and Problem

[1] Authors: M Nandini Priyanka, S Murugan, K. N. H. Srinivas, T. D. S. Sarveswararao, E. Kusuma Kumari. Title: Smart IoT Device for Child Safety and Tracking. Published in: 2019 IEEE. The system is developed using Link-It ONE board programmed in embedded C and interfaced with temperature, heartbeat, touch sensors and also GPS, GSM & digital camera modules. The novelty of the work is that the system automatically alerts the parent/caretaker by sending SMS, when immediate attention is required for the child during emergency.

Merits: The parameters such as touch, temperature & heartbeat of the child are used for parametric analysis and results are plotted for the same.

Demerits: To implement the IoT device which ensures the complete solution for child safety problems.

[2] Authors: Akash Moodbidri, Hamid Shahnasser Title: Child safety wearable device. Published in: 2017 IEEE. The purpose of this device is to help the parents to locate their children with ease. At the moment there are many wearable's in the market which helps to track the daily activity of children and also helps to find the child using Wi-Fi and Bluetooth services present on the device.

Merits: This wearable over other wearable is that it can be used in any phone and it is not necessary that an expensive smartphone is required and doesn't want to be very tech savvy individual to operate.

Demerits: As, this device's battery gives short life-time.

[3] Authors: Aditi Gupta, Vibhor Harit. Published in: 2016 IEEE. Title: Child Safety & Tracking Management System by using GPS. This paper proposed a model for child safety through smart phones that provides the option to track the location of their children as well as in case of emergency children is able to send a quick message and its current location via Short Message services.

Merits: The advantages of smart phones which offers rich features like Google maps, GPS, SMS etc.

Demerits: This system is unable to sense human behaviour of child.

[4] Authors: Dheeraj Sunehera, Pottabhatini Laxmi Priya. Title: Children Location Monitoring on Google Maps Using GPS and GSM. Published in: 2016 IEEE. This paper provides an Android based solution for the parents to track their children in real time. Different devices relate to a single device through channels of internet. The concerned device is connected to server via internet. The device can be used by parents to track their children in real time or for women safety. The proposed solution takes the location services provided by GSM module. It allows the parents to get their child's current-location via SMS. Merits: A child tracking system using android terminal and hoc networks.

Demerits: This device cannot be used in rural areas.

2.3 Problem Statement Definition

Child tracker helps the parents in continuously monitoring the child's location. They can simply leave their children in school or parks and create a geofence around the particular location. By continuously checking the child's location notifications will be generated if the child crosses the geofence. Notifications will be sent according to the child's location to their parents or caretakers.

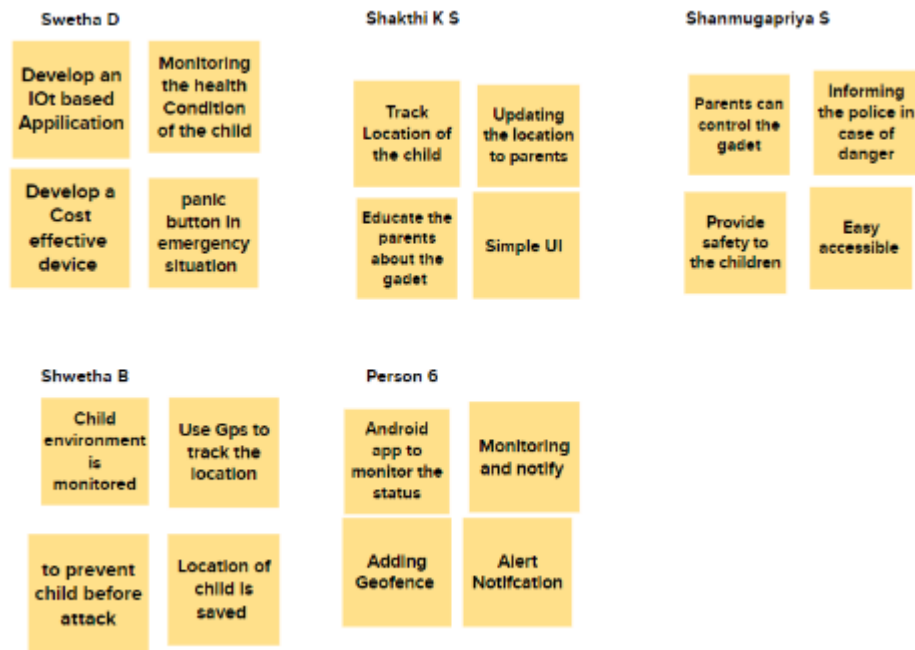

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

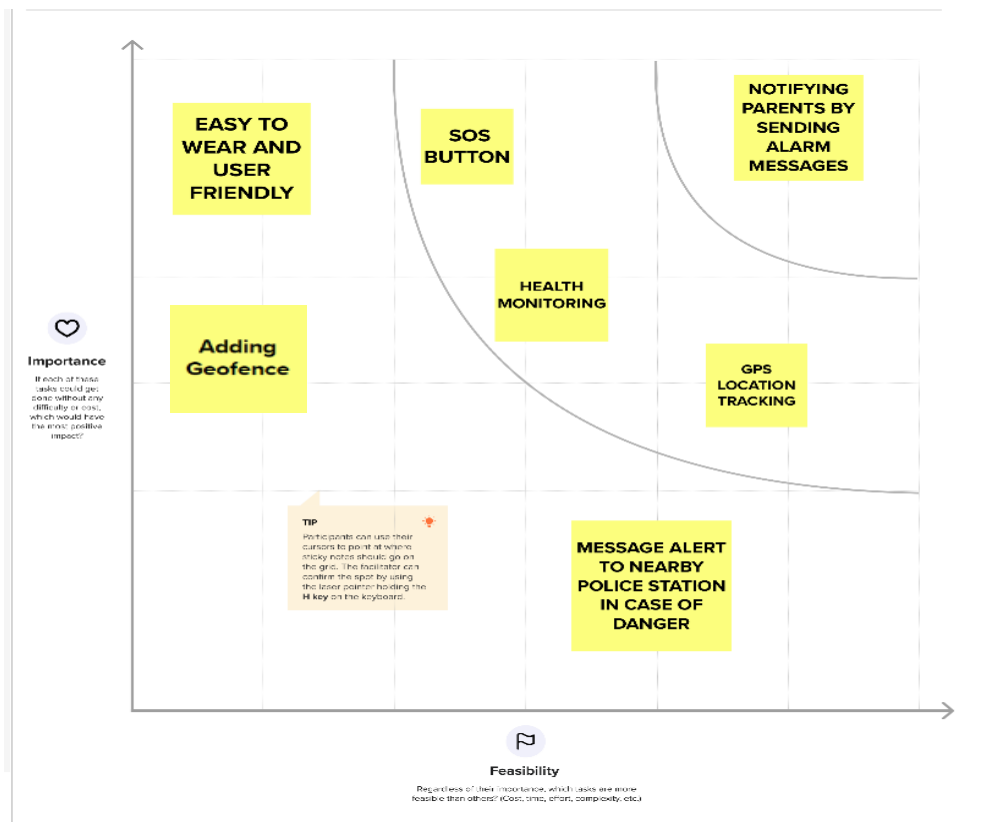

3.2 Ideation & Brainstorming

3.3 Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	A tracker that helps parents track a child's location so that the child does not get into dangerous situations.
2.	Idea / Solution description	<ul style="list-style-type: none"> • Child tracker helps the parents in continuously monitoring the child's location. • They can simply leave their children in school or parks and create a geofence around the particular location. • By continuously checking the child's location notifications will be generated if the child crosses the geofence. Notifications will be sent according to the child's location to their parents or caretakers. The entire location data will be stored in the database.
3.	Novelty / Uniqueness	<ul style="list-style-type: none"> • A tracker used for child's safety and protection, such that it won't interfere with the day-to-day life of the child as well as be a very easy to use interface for parents has not been developed yet. • Hence, the proposed solution will ensure that there is a device that can be used in all areas, and uses different sorts of software's integrated together to maintain accuracy and ensure the safety of the child.
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none"> • Reduce the anxiety, worry and nervousness of a parent when they are not around the child. Having a peace of mind on the child's whereabouts will increase customer satisfaction, as well as the inclusion of an easy to use and interactive user interface. • The reduction of child kidnappings, injuries, accidents, and missing children in the country
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"> • Business to Consumer Model Licensing Model Subscription Model Freemium Model
6.	Scalability of the Solution	<ul style="list-style-type: none"> • By adopting multiple data storage technologies,controlling the IoT data pipeline, and using automated bootstrapping we ensure that thedevice is highly scalable.

3.4 Problem Solution fit

Define CS fit into CC	1. CUSTOMER SEGMENT(S) CS <p>Children in the age below 14 years and their parents are our customers.</p> <p>We are targeting the school going children because they are in high risk of child trafficking</p>	6. CUSTOMER CONSTRAINTS CC <p>Child trafficking is becoming more common nowadays. To reduce the child trafficking and to ensure protection of children from any kind of abuse, a cost efficient device is designed. This device also provides health monitoring facility to the parents by which they can monitor the health condition of their children</p>	5. AVAILABLE SOLUTIONS AS <p>Children need to carry mobile phones in order to contact their parents.</p> <p>Location need to be found using GPS tracking in case the child is reported missing.</p>	Explore AS, differentiate
Focus on J&P, tap into BE, understand KC	2. JOBS-TO-BE-DONE / PROBLEMS J&P <p>Continuous tracking of the children by the means of microchip present in the device which ensure the safety of children</p> <p>Instant notification to their parents and to their close relative if the children is in danger.</p> <p>Health monitoring and reporting the health condition to their parents.</p>	9. PROBLEM ROOT CAUSE RC <p>Due to carelessness of parents and lack of awareness of children about child trafficking.</p> <p>Children do not have access to contact their parents or nearby police station in case of emergency.</p> <p>If child feels physically weak or if their body condition is abnormal, they are out of help in such scenarios.</p>	7. BEHAVIOUR BE <p>Click the notify the parents in case of any emergency.</p> <p>Never hesitate to contact parents if they find any doubtful strangers.</p> <p>Can also contact the nearby police station if they are in need of them.</p> <p>Charge the device regularly.</p>	Focus on J&P, tap into BE, understand RC
	3. TRIGGERS TR <ul style="list-style-type: none"> The child is reported missing When child is in danger When the child has poor or abnormal health condition 4. EMOTIONS: BEFORE / AFTER EM <ul style="list-style-type: none"> Insecure Unhappy Bad Negate 	10. YOUR SOLUTION SL <p>Child tracker helps the parents in continuously monitoring the child's location. They can simply leave their children in school or parks and create a geofence around the location. By continuously checking the child's location notifications will be generated if the child crosses the geofence. Notifications will be sent according to the child's location to their parents or caretakers. The entire location data will be stored in the database.</p>		
			8. CHANNELS of BEHAVIOUR CH <p>ONLINE</p> <ul style="list-style-type: none"> Keep track of their location Keep monitoring their health condition Notify to the parents <p>OFFLINE</p> <ul style="list-style-type: none"> Contact the nearby police station Contact the parents in case of abnormal situations. 	

4. REQUIREMENT ANALYSIS

4.1 Functional requirement

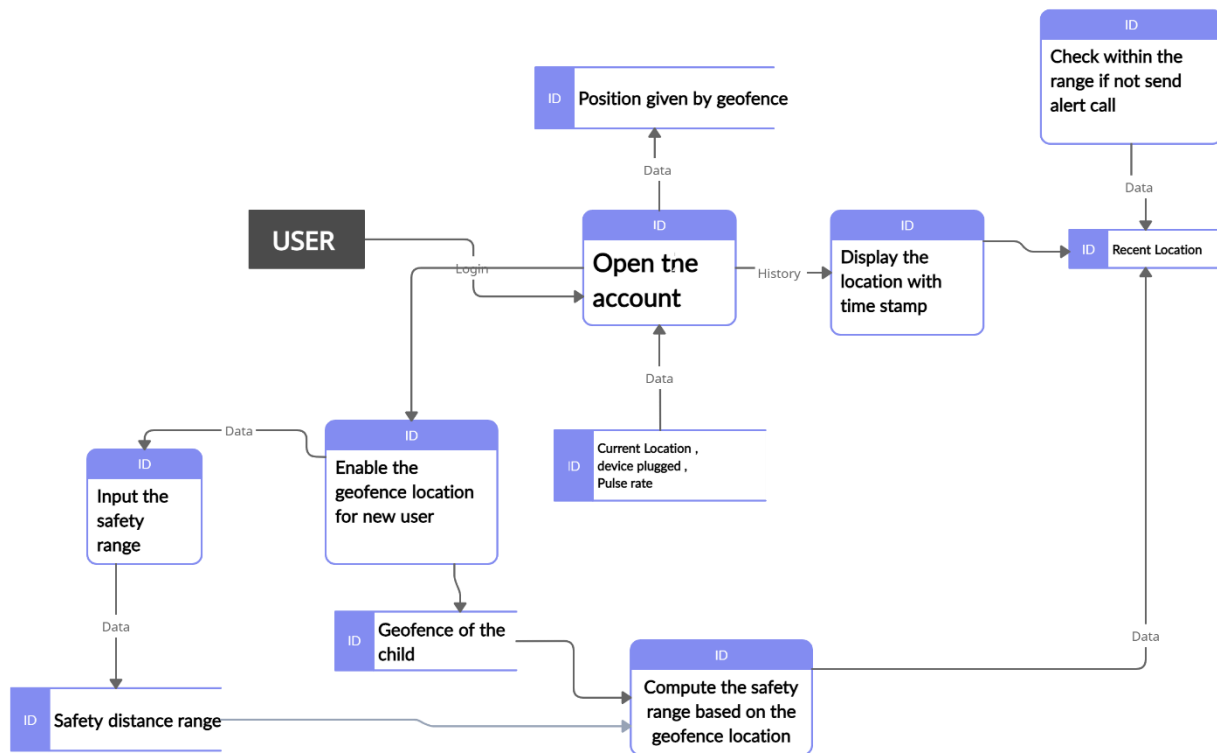

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Notification	Notification Via Mobile App and normal message
FR-4	Monitoring	App to monitor the child location

4.2 Non-Functional requirements

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	This model can help to notify the parents in case of emergency
NFR-2	Security	Parents can feel secure because if the child leave the desired location and immediately a notification will be sent
NFR-3	Reliability	<ul style="list-style-type: none">✓ Easy to use✓ Portable✓ Flexible✓ Cost effective
NFR-4	Performance	<ul style="list-style-type: none">✓ Create a Child tracker which helps the parents with continuously monitoring the child's location.✓ The notification will be sent according to the✓ child's location to their parents or caretakers.
NFR-5	Availability	<ul style="list-style-type: none">✓ Track your child even in a crowd✓ Know the current location
NFR-6	Scalability	This model ensures the safety and tracking of the children. Parents need not worry about their children.

5. PROJECT DESIGN

5.1 Data Flow Diagrams

5.2 Solution & Technical Architecture

➔ Solution Architecture

➔ Technical Architecture

Table-1: Components & Technologies:

S. No	Component	Description	Technology
1.	User Interface	How user interacts with application <u>e.g.</u> Web UI, Mobile App, Chatbot etc.	Java
2.	Application Logic-1	Logic for a process in the application	Java
3.	Database	Data Type, Configurations etc.	Firebase
4.	External API-1	Purpose of External API used in the application	Google Maps API
5.	Notification	Alert Notification when exited the geofence	Firebase Cloud Messaging

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Security Implementations	List all the security / access controls implemented, use of firewalls etc.	We are using the Google Maps <u>API</u> , so for every instance of time it updates the current location of the children to their parents/caretakers.
2.	Scalable Architecture	Justify the scalability of architecture (3 – tier, Micro-services)	The technology is used to monitor and send alert notification.
3.	Availability	Justify the availability of applications (<u>e.g.</u> use of load balancers, distributed servers etc.)	We are using the geofence, a service that triggers an action when a device enters a set location
4.	Performance	Design consideration for the performance of the application	We are using Firebase , to send the notification

5.3 User Stories

Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

TIP
As you add steps to the experience, document those "touch points" the user might encounter in order to give new ideas.

Scenario Child Monitoring and alerting	Entice How Child Location is monitored?	Enter How message is sent notified to parent?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps What does the person (or group) typically experience?	Create an app By give parents can view the location in the app	When child click panic button by using given module message is sent to the parents	Alert message sent to the parents update the location everyday	Review of Application	Alert Parents
Interactions What interactions do they have at each step along the way? • People: Who do they see or talk to? • Places: Where are they? • Things: What digital touchpoints or physical objects would they use?	Regular monitoring Interacting with child	updating the location everyday	Parents needs are met		Connection between user when data is sent out notification can be seen
Goals & motivations At each step, why is a person's primary goal or motivation? (Child's safety, peace of mind, etc.)	Monitoring Child Parents child in zone		Testing care of child in absence	Notify when child is in working the field Notify when parent's button is pressed	Alert message is sent
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Happy parents	Child taken care without parents	Regular updates	User Friendly	Cost Effective and easy to use
Negative moments What steps does a typical person find frustrating, confusing, annoying, costly, or time consuming?	Alert Sound is not given		Message along with location not sent		Change in location not sent via message
Areas of opportunity How might we make each step better? What ideas do you have? What have others suggested?	If location is not sent	Alert sound is given in now up	Alert sound in case of emergency	Can be used when parents are working	

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	3	High	Swetha D
Sprint-1		USN-2	As a user, I will receive verification email once I have registered for the application.	3	High	Shakthi K S
Sprint-1		USN-4	As a user, I can register for the application	3	Medium	Soehashri S
Sprint-2	Login	USN-3	As a user, I can log into the application by entering email & password	5	High	Shanmugasriya S Shwetha B
Sprint-4	Dashboard	USN-6	As a user, I can receive alert notifications if the movement is beyond the geofence.	13	High	Swetha D Shwetha B
Sprint-3		USN-7	As a user I can add the geofence	10	Medium	Shakthi K S Shanmugasriya S
Sprint-3		USN-8	As a user I can update the <u>geofence whenever</u> necessary.	13	Medium	Soehashri S

6.2 Sprint Delivery Schedule

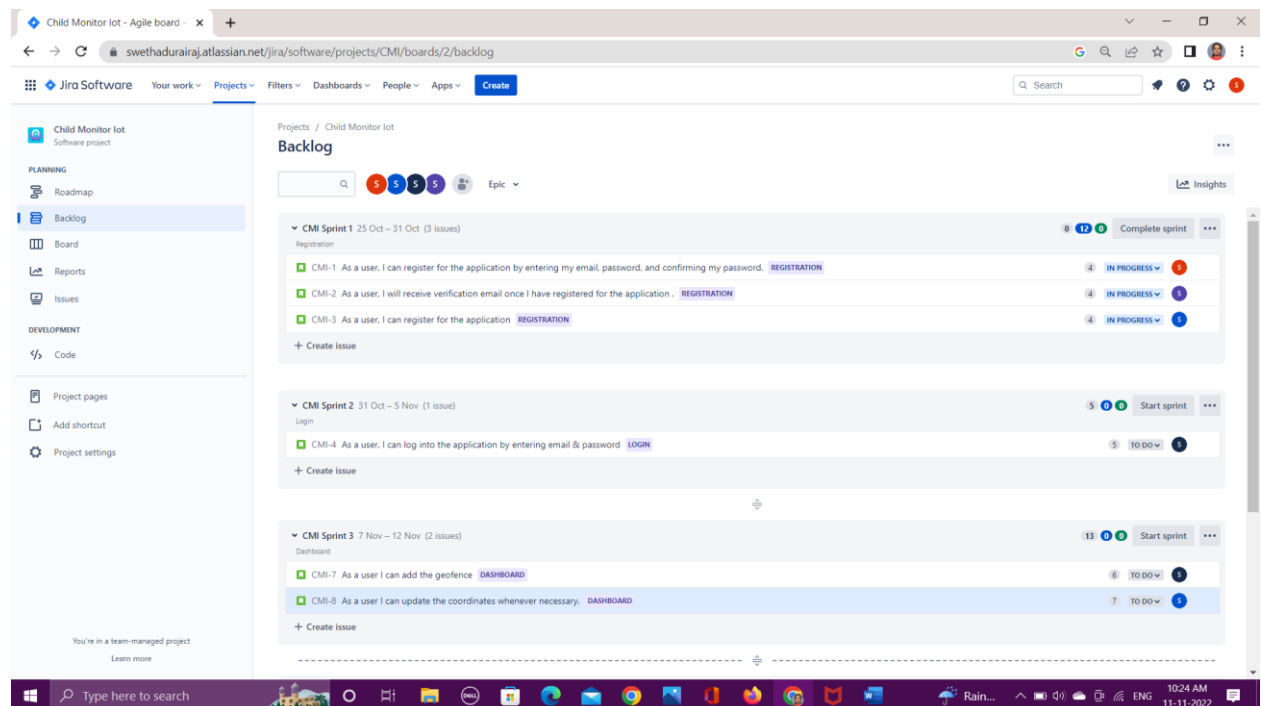

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	12	6 Days	24 Oct 2022	29 Oct 2022	12	29 Oct 2022
Sprint-2	10	6 Days	31 Oct 2022	05 Nov 2022	10	05 Nov 2022
Sprint-3	13	6 Days	07 Nov 2022	12 Nov 2022	13	12 Nov 2022
Sprint-4	13	6 Days	14 Nov 2022	19 Nov 2022	13	19 Nov 2022

➔ Backlog

7. CODING & SOLUTIONING (Explain the features added in the project along with code)

7.1 Feature 1(Adding Geofence)

- ➔ Geofence is like a round wall covering the given location. So parents can use them to mark the location where their children is going .
- ➔ Multiple Geofence can be added.

```
8. package com.example.geofence;
import android.app.PendingIntent;
import android.content.Context;
import android.content.ContextWrapper;
import android.content.Intent;
import android.widget.Toast;

import com.google.android.gms.common.api.ApiException;
import com.google.android.gms.location.Geofence;
import com.google.android.gms.location.GeofenceStatusCodes;
import com.google.android.gms.location.GeofencingRequest;
import com.google.android.gms.maps.model.LatLng;

public class GeofenceHelper extends ContextWrapper {

    private static final String TAG = "GeofenceHelper";
    PendingIntent pendingIntent;

    public GeofenceHelper(Context base) {
        super(base);
    }

    public GeofencingRequest getGeofencingRequest(Geofence geofence) {
        return new GeofencingRequest.Builder()
            .addGeofence(geofence)
    }
}
```

```

        .setInitialTrigger(GeofencingRequest.INITIAL_TRIGGER_ENTER)
        .build();
    }

    public Geofence getGeofence(String ID, LatLng latLng, float radius,
int transitionTypes) {
        return new Geofence.Builder()
            .setCircularRegion(latLng.latitude, latLng.longitude,
radius)
            .setRequestId(ID)
            .setTransitionTypes(transitionTypes)
            .setLoiteringDelay(5000)
            .setExpirationDuration(Geofence.NEVER_EXPIRE)
            .build();
    }

    public PendingIntent getPendingIntent() {
        if (pendingIntent != null) {
            return pendingIntent;
        }
        Intent intent = new Intent(this, GeofenceBroadcastReceiver.class);
        pendingIntent = PendingIntent.getBroadcast(this, 2607, intent,
PendingIntent.FLAG_IMMUTABLE);

        return pendingIntent;
    }

    public String getErrorString(Exception e) {
        if (e instanceof ApiException) {
            ApiException apiException = (ApiException) e;
            switch (apiException.getStatusCode()) {
                case GeofenceStatusCodes
                    .GEOFENCE_NOT_AVAILABLE:
                    return "GEOFENCE_NOT_AVAILABLE";
                case GeofenceStatusCodes
                    .GEOFENCE_TOO_MANY_GEOFENCES:
                    return "GEOFENCE_TOO_MANY_GEOFENCES";
                case GeofenceStatusCodes
                    .GEOFENCE_TOO_MANY_PENDING_INTENTS:
                    return "GEOFENCE_TOO_MANY_PENDING_INTENTS";
            }
        }
        return e.getLocalizedMessage();
    }
}

```

7.2 Feature 2 (Alert Notification)

- ➔ Once geofence is added , when the child enters the geofence a notification will be sent
- ➔ When the child leaves the geofence a notification will be sent .

```

8 package com.example.geofence;

import android.content.BroadcastReceiver;
import android.content.Context;
import android.content.Intent;

import android.os.Handler;

public class GeofenceBroadcastReceiver extends BroadcastReceiver {

    private static final String TAG = "GeofenceBroadcastReceiv";

    @Override
    public void onReceive(Context context, Intent intent) {
        // TODO: This method is called when the BroadcastReceiver is
        receiving
        // an Intent broadcast
        //.
        /*Toast.makeText(context, "GEOFENCE_ENTERED",
        Toast.LENGTH_SHORT).show();

        final Toast mToastToShow;
        int toastDurationInMilliseconds = 1200000;
        mToastToShow = Toast.makeText(context, "GEOFENCE_EXITED",
        Toast.LENGTH_LONG);

        // Set the countdown to display the toast
        CountdownTimer toastCountDown;
        toastCountDown = new CountdownTimer(toastDurationInMilliseconds,
100000) {
            public void onTick(long millisUntilFinished) {
                mToastToShow.show();
            }

            public void onFinish() {
                mToastToShow.cancel();
            }
        };

        // Show the toast and starts the countdown
        mToastToShow.show();
        toastCountDown.start();*/

        NotificationHelper notificationHelper = new
        NotificationHelper(context);

        notificationHelper.sendHighPriorityNotification("GEOFENCE_TRANSITION_ENTER
        ", "", MapsActivity.class);

        GeofencingEvent geofencingEvent = GeofencingEvent.fromIntent(intent);

        if (geofencingEvent.hasError()) {
            Log.d(TAG, "onReceive: Error receiving geofence event...");

```

```

        return;
    }

    List<Geofence> geofenceList =
    geofencingEvent.getTriggeringGeofences();
    for (Geofence geofence: geofenceList) {
        Log.d(TAG, "onReceive: " + geofence.getRequestId());
    }

    // Location location = geofencingEvent.getTriggeringLocation();
    int transitionType = geofencingEvent.getGeofenceTransition();

    switch (transitionType) {
        case Geofence.GEOFENCE_TRANSITION_ENTER:

            notificationHelper.sendHighPriorityNotification("Entered
the Location", "", MapsActivity.class);
            break;

        case Geofence.GEOFENCE_TRANSITION_EXIT:

            notificationHelper.sendHighPriorityNotification("Exited
the Location ", "", MapsActivity.class);

9 RESULTS

1. User Registration :

User gets registered to the app using their mail and create their password. On the user is registered a verification mail will be sent to the user mail id. The user needs to verify the account. All user details are stored in the firebase and verification mail is sent by firebase authentication .

Registration Page :

3. Adding Geofence and Alert Notification

User can add geofence in the location where they want to add or where their child is going play so they can monitor the child location . Once the child enter the geofence alert notification says entered the location will be displayed . When the child leaves the geofence alert notification says exited the location will displayed.

Geofence

Notification

10 ADVANTAGES & DISADVANTAGES

ADVANTAGES:

- ✓ Simple and easy to use
- ✓ Parents can feel secure because if the child leave the desired location and immediately a notification will be sent
- ✓ Geofence can be added easily

DISADVANTAGES:

- ✓ Multiple geofence can be a problem

11 CONCLUSION

This research demonstrates Smart IoT device for child safety and tracking, to help the parents to locate and monitor their children. Through this device, the parent can track and monitor their child with just a simple app. It is not possible to always stay beside children as most of the parents need to go for work. With this project, parents can track the location of their children and get alerts whenever the child out of the geofence. It becomes easy for parents to look after their child while working. This device is efficient to use. Thus, by keeping in mind the advantages and applications we are developing a child monitoring device. In order to avoid kidnapping cases, the child monitoring system is needed.

12 FUTURE SCOPE

The future work would be to further develop and implement the safety wearable device so that it could be watch or sown into a fabric that could be worn, using synthetic fibers.
